

Manufacturing Automation

Streamline Production, Reduce Downtime & Improve Efficiency with AI

Manufacturers today must deliver faster, with more precision, across increasingly complex supply chains. But legacy systems, disconnected data, and manual tracking hold them back.

With Agentic Automation from Scale Through Automation, AI agents automate workflows across procurement, inventory, shop floor, quality checks, maintenance, and reporting turning your operations into a connected, efficient, and insight-driven ecosystem.

The Vision: Smart, Scalable, Self-Correcting Manufacturing

AI agents streamline the end-to-end manufacturing process from vendor onboarding to predictive maintenance so teams can operate with less friction and more precision.

What's Holding You Back?

- Manual PO creation and vendor communication
- Lack of real-time production and inventory visibility
- Slow quality control and incident handling
- Reactive maintenance and unplanned downtime
- Delayed reporting and siloed data across systems

Let the System Do the Work

- Automate vendor onboarding, PO creation, and order tracking
- Sync inventory data with procurement and production systems
- Monitor production lines, detect anomalies, and alert operators
- Schedule preventive maintenance based on usage and performance data
- Digitize quality control forms and flag issues in real time

Manufacturing Automation

- Generate production, cost, and performance reports instantly

Agentic Workflows in Action

Automated Procurement & Inventory Sync: AI agents manage POs and stock updates.

Shop Floor Monitoring: Real-time alerts from sensors and systems.

Quality Control Automation: Capture and log QC data, flag issues.

Predictive Maintenance: Schedule fixes based on data trends.

Production Reporting: Generate reports instantly, no data crunching needed.

Key Capabilities

- Vendor onboarding & PO automation
- Shop floor and inventory system integration
- IoT & sensor data monitoring
- Quality control and compliance logging
- Preventive and predictive maintenance triggers
- Manufacturing analytics and KPI dashboards

Who This Is For

- Manufacturers scaling operations across multiple plants
- Factory teams with aging systems and manual reporting
- Ops leaders seeking to improve throughput and reduce waste
- Production teams aiming to cut downtime and unplanned costs

What You Get

- 3050% faster procurement and inventory processes

Manufacturing Automation

- Up to 60% fewer production slowdowns
- Reduced quality issues and faster resolution
- Lower equipment downtime and maintenance costs
- Real-time visibility across the entire plant

Why Scale Through Automation?

We connect your tools, teams, and tech and power it with AI agents that deliver real manufacturing performance.

Factory-Focused Design: Built to match your shop floor and flow.

Real-Time Agentic Automation: AI acts on live data, not batch reports.

Full Lifecycle Support: We manage the audit, design, build, and support.

Get Started

Make your production lines run smoother, faster, and smarter with AI agents at every key touchpoint.
