

# Operations & Supply Chain Automation

## Build Resilient, Real-Time Ops That Run on Autopilot

Today's operations span multiple systems, teams, vendors, and geographies and when they rely on manual workflows, delays, errors, and bottlenecks are guaranteed.

With Agentic Automation from Scale Through Automation, intelligent AI agents coordinate your entire supply chain from procurement to warehouse to last-mile with real-time decision-making, exception handling, and automation across every node.

## The Vision: Self-Optimizing Operations

AI agents streamline your entire operations lifecycle, predicting needs, reacting to change, and driving efficiency in every corner of your supply chain.

## What's Holding You Back?

- Manual purchase orders and stock checks
- Slow order-to-fulfillment cycles
- Inventory blind spots and over/understocking
- Delayed vendor communication and approvals
- Limited visibility into supply chain performance

## Let the System Do the Work

- Predict demand and track inventory across systems
- Auto-generate and route purchase orders based on stock levels
- Optimize warehouse layouts, picking routes, and shipment timing
- Sync data across inventory, procurement, and ERP systems
- Monitor supplier performance and trigger escalation alerts

# Operations & Supply Chain Automation

- Analyze throughput and provide real-time operational insights

## Agentic Workflows in Action

Demand Forecasting: Predicts product movement using trends and sales.

Procurement & PO Generation: Automates replenishment workflows.

Smart Fulfillment & Routing: Optimizes packing, routing, and delivery.

Warehouse Optimization: Adjusts stock levels and replenishes zones.

Vendor & Logistics Monitoring: Tracks performance and flags issues.

## Key Capabilities

- Real-time inventory visibility
- Predictive demand planning
- Autonomous PO generation and routing
- Warehouse and delivery optimization
- Supplier scoring and exception alerts
- ERP, logistics, and WMS integration

## Who This Is For

- Operations leaders managing multi-location logistics
- Retailers and manufacturers with high SKU volume
- Scaling companies that can't keep hiring ops staff
- Any business dealing with manual, reactive ops processes

## What You Get

- 30-50% faster order-to-fulfillment cycles

# Operations & Supply Chain Automation

- Reduced stockouts and overstocking
- Real-time visibility into inventory and shipments
- Lower procurement and logistics costs
- Scalable operations without more staff

## Why Scale Through Automation?

We turn complex supply chains into intelligent, adaptive ecosystems that drive growth.

Workflow-First Strategy: Optimize before we build.

Full-System Integration: Connect across platforms and vendors.

Agentic Automation at the Core: AI agents predict and respond.

Built to Scale: Flexible across volumes, regions, and needs.

## Get Started

Let AI handle the complexity and give your team the freedom to focus on outcomes.
